RENOVATION SET

4 wood panels painted in your colors or with a ready-to-paint primer

This wood has not undergone any chemical treatment, it has gone through different phases, in particular a drying in the open air for several years, completed at the end of the process by a passage in slow dryer for about a month. This process ensures an optimal wood hygrometry rate for outdoor use conditions.

16 pins and 16 polyamide seals (eyelet protection)

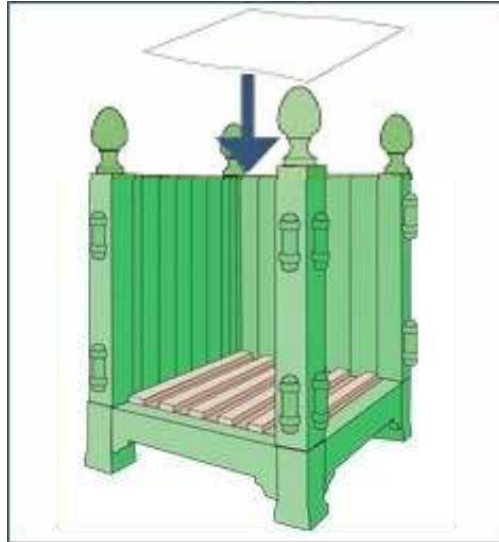

4 U in aluminum to protect the panels and a set of wooden slats and geotextile felts

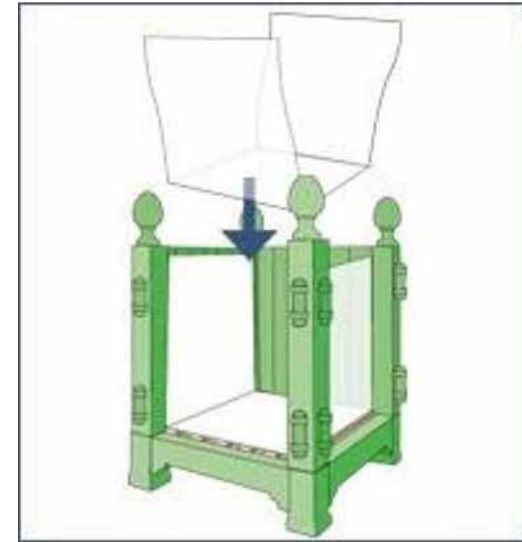

PLANTING ADVICE

Wooden slats

Planting felt
(Under the drainage bed)

Planting felt
(Crossed leaves)

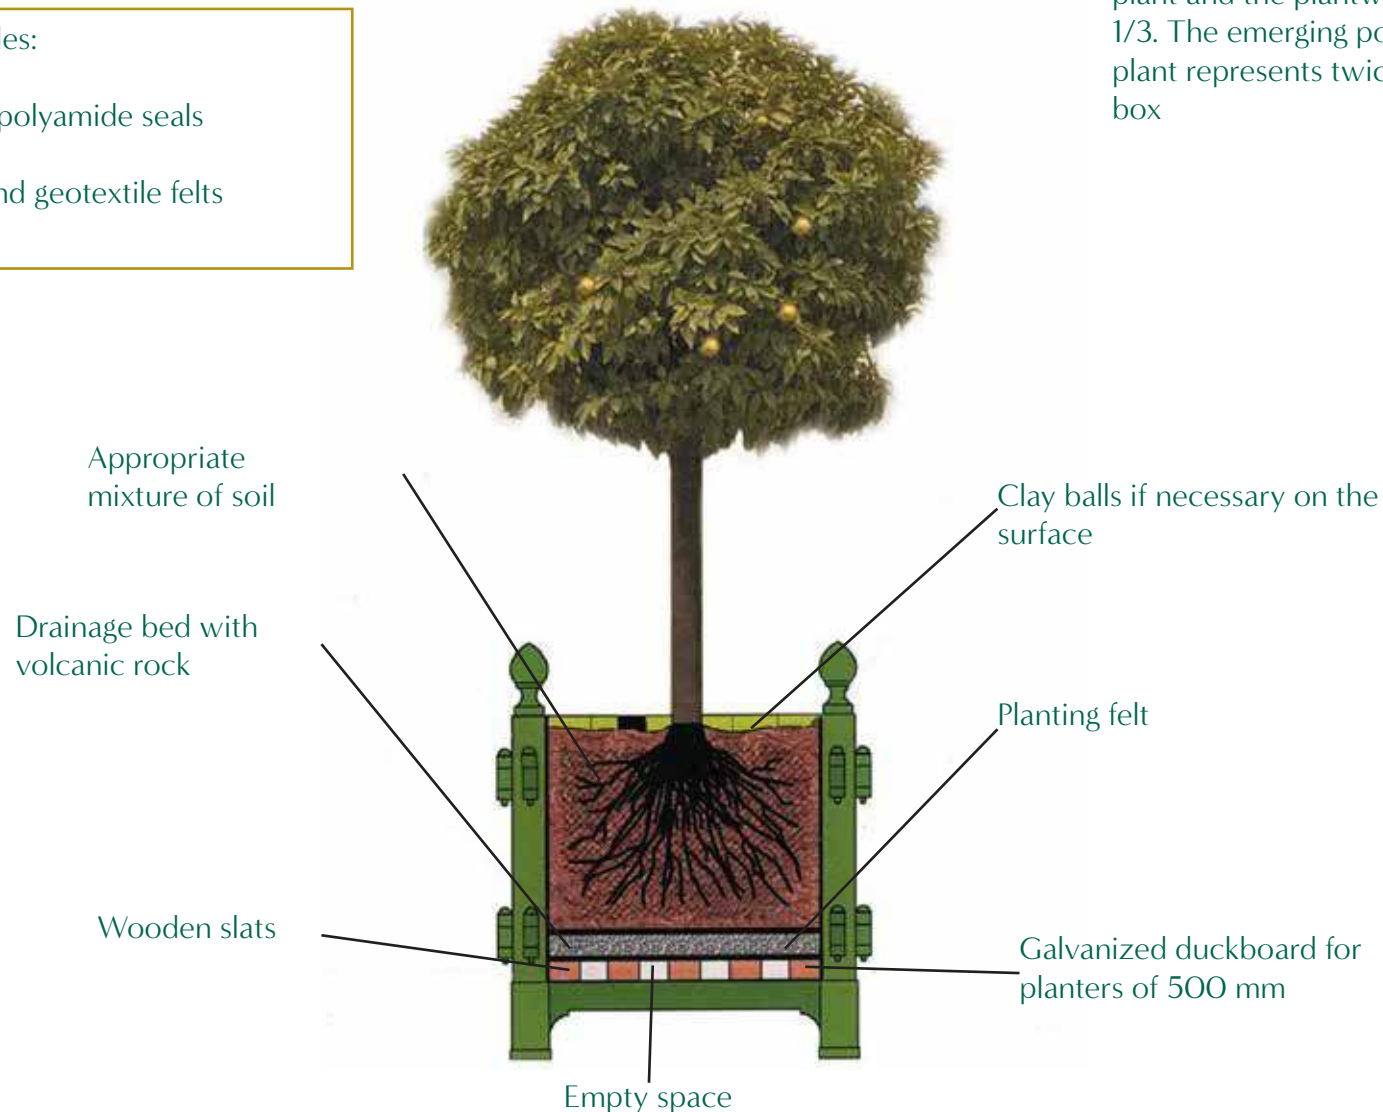

When placing plants, we recommend to:

- Place in the bottom of the box, above the wooden slats, a first planting felt then the drainage bed according to the plant (usually a bed of clay beads), then two planting felts crossed above one-another (the planting felts are provided).
- Cover everything with a mixture of soil that must be light and filtering to surround the roots. Usually (depending on the plant) a mixture of 60% soil, 20% blond peat, 10% river sand and 10% crushed pozzolana.

The Renovation box Includes:

- 4 wooden panels
- 16 polyamide pins and polyamide seals
- 4 U in aluminum
- 1 set of wooden slats and geotextile felts

The classic proportion between the plant and the planter is 2/3 vs 1/3. The emerging portion of the plant represents twice the side of the box
