

ELECTRIFICATION SYSTEM FOR ORANGE TREE PLANTER

We install a rigid sheath inside one of the cast iron feet allowing the passage of a cable which goes through the heart of the mound and which will come out discreetly under the box for the connection of the light fixture.

Light fixture not included

Example of a connection under the planter

IRRIGATION SYSTEM FOR ORANGE TREE PLANTER

We install a rigid sheath inside one of the cast iron feet, fitted with a flexible pipe that comes out under the box in the middle and above at the edge of the soil block, so that irrigation can be carried out as aesthetically as possible.

By default we leave 1 meter of flexible pipe below, to connect to the site irrigation, and 1 meter above equipped with a drip nozzle.
